1. Introduction

This manual was made in order to understand everything that this mod includes in depth. At first this mod was originally a successor to a similar mod for **ERA 2.46** called "Amethyst Upgrades", in which it was also a successor to "Four Upgrades" for **In The Wake of Gods 3.58f**. The mod was going to continue the legacy of the last two mentioned mods, but thanks to the huge support that the author obtained, in addition to the inspirations and motivations, the mod covers a huge amount of content, such as new creature banks, artifacts, decorative objects, etc. This manual may be updated as updates with new content are released, so be sure to read the current version of the manual in the lower corner of the cover.

2. Installation and use

The newest versions are compatible as of **ERA III v3.8** so before using it, make sure to check the version of ERA used, or else there will be problems and malfunctions.

New options in WoG

There are three new options to take into account to customize your game, the first allows you to get your level 8 creature in town, the second option allows you to be able to obtain an additional creature in addition to the 7 already existing and the third allows you to enable and disable "Dwelling banks" Creature Banks that are identical to dwellings.

3. Changes in some WoG scripts

Week of Monsters: Week of Monsters now works with the Third Upgrades Mod, allowing these creatures to have their weeks.

Hero Specialization Boost: Heroes who specialize in creatures can now also specialize with third upgrade creatures for example; Valeska, who can specialize from Archers, Marksmen, and Crossbowmen at the same time.

Replace Objects During Wogification: This is an important option in the mod, when enabled, it allows you to replace objects from the map with those from the mod and WoG.

Level 8 dwellings: The divine creatures of "In The Wake of Gods" (level 8 creatures), have become third upgrades in this mod, and now these level 8 dwellings are occupied by even more powerful creatures. Such creatures can only be obtained in these dwellings (unless TUM Fouth Upgrades in Town script is enabled).

Mirror of The Home-way: It is now "Town Gate", as in HotA.

Disabled Options by the mod

Neutral Town: It is not supported due to the change of existing creatures in Conflux Town.

Extended Upgrades: It uses a mechanic similar to the one in the mod.

Universal Upgrades: It uses a mechanic similar to the one in the mod and it's more chaotic.

Level 7 monsters become level 8: Lack of compatibility, even if it's fixed it will not be enabled, because it breaks the original mechanics.

Additional Upgrades: It uses a mechanic similar to the one in the mod.

Rebalanced Creatures: Lack of compatibility, causes bugs when trying to upgrade creatures in Hill Fort.

Enhanced Monsters: Lack of compatibility.

Buckler of Beelzebub: A combo artifact with sets similar to this option was created in the mod.

4. Contents of the mod

New upgrades in towns: Special Buildings

Every town can have a new building that is used as a general 'upgrade guild'. Thanks to this, you will be able to upgrade creatures in the town to their new forms.

Each town type has a different building, a different description, a different animation and a different cost.

To try to build the new building **RIGHT-click** on your Town Hall (or Village Hall, City Hall, or Capitol).

You have always only one prerequisite to build - you must have a Castle. And of course, you have to have the right resources.

The special buildings are:

Heavenly Tower (Castle)

Order of The Sun (Rampart)

Cloud Castle (Tower)

Kreegans' Gate (Inferno)

Hall of The Pit (Necropolis)

Underworld Entrance (Dungeon)

Barbarian Citadel (Stronghold)

Temple of The Snake (Fortress)

Escaton's Crystal (Conflux)

The Heavenly Tower

This amazing construction reaches the ancient clouds above our world, where your creatures may receive new powers or become better trained.

The Heavenly Tower lets you upgrade:

- Halberdiers into Royal Halberdiers
- Marksman to Crossbowmen
- Royal Griffins into Cesar Griffins
- Crusaders into Inquisitors
- Zealots into High Priests
- Champions into Holy Champions
- Archangels into Supreme Archangels

30

Order of The Sun

In this temple dedicated to the mysterious Order of The Sun some of your creatures may find a completely new way to use magic.

- Centaur Capitans into Centaur Generals
- Dwarves into Berserker Dwarves
- Grand Elves into Sharpshooter Elves
- Silver Pegasi into Golden Pegasi
- Dendroid Guards do Elder Dendroids
- War Unicorns into Legendary Unicorns
- Gold Dragons into Diamond Dragons

Do you want to build it?

40

Cloud Castle

Built on the top of Bracada's highest mountains this castle is in fact an academy for the greatest alchemists who can highly improve your units.

In the Cloud Castle you can upgrade:
Master Gremlins into Grandmaster Gremlins
Obsidian Gargoyles into Marble Gargoyles
Iron Golems into Steel Golems
Archmages into Arcane Mages
Genies into Arcane Genies
Nagas into Naga Empresses
Titans into Lords of Thunder

15

Kreegans' Gate

When opened by the most powerful heretics, this gate can take your creatures to the fiery world of Kreegans, where they can evolve.

By traveling through this gate you can upgrade:
Familiars into Hellish Plagues
Magogs into Winged Magog
Cerberus into Astral Cerberus
Horned Demons into Sharp-Horned Demons
Pit Lords do Pit Masters
Efreet Sultans into Efreet Rajahs
Archdevils into Hell Barons

15

Hall of The Pit

This hall may take you to the centre of necromancy itself, where the greatest necromancers may make your undead creatures more powerful.

At The Pit you can upgrade:
Skeleton Warriors into Skeleton Knights
Zombies into Ghouls
Wraiths into Spectre
Vampires into Nosferatu
Power Liches into Ancient Liches
Black Knight into Death Knight
Ghost Dragons into Blood Dragons

Do you want to build it?

21000

25

35

Underworld Entrance

By entering the underworld some of your creatures may drain new powers from there to become even more fearsome and fiery.

The underworld powers let you upgrade:
Infernal Troglodites into Phosforous Troglodytes
Harpy Hags into Harpy Sanguinaries
Evil Eyes into Monstrous Eyes
Medusa Queens into Medusa Empresses
Minotaur Kings into Black Minotaurs
Scorpicore into Chimera
Black Dragons into Darkness Dragons

35

Barbarian Citadel

At this barbarian war camp some of your creatures may train through hours on end to finally master new battle techniques.

In this citadel you can upgrade:

Hobgoblins into Hobgoblin Overlords

Wolf Raider into Killer Wolf Rider

Orc Chieftans into Orc Leaders

Ogre Magi to Elder Ogres

Thunderbirds into Lightningbirds

King Cyclops into Cyclops Emperor

Ancient Behemoths into Ghost Behemoths

Do you want to build it?

15

Temple of The Snake

This mysterious temple holds strong primal magic of Tatilia's lizard ancestors which can completely transform some creatures.

The Temple of The Snake lets you upgrade:

Gnoll Marauders into Gnoll Shaman

Lizardmen into Elite Lizards

Bronze Gorgons into Deadly Gorgons

Dragon Fly into Chaotic Dragon Fly

Royal Basilisks into Lava Basilisks

Vyvern Monarchs into Acid Vyverns

Chaos Hydras into Hell Hydras

Do you want to build it?

20

Note: Right-clicking on the town hall doesn't disable the town destroying feature. However, when it is not needed, the standard text will not be shown. It will 'return' if you build a capitol or destroy the fort - then you'll see the standard text after you click on the 'OK' button. If you completely destroy a town, the new structure will be destroyed as well.

New Creatures

ID	Name	Faction	Level	Atk	Def	Min dmg	Max dmg	HP	Speed	Growth	Fight/AI Value	Cost	Desc	Dwelling and obtainment
197	 Royal Halberdier	Castle	1	7	6	2	4	10	6	14	149/149	90 gold	Immune to Champion charge bonus.	Guardhouse (In town)

Ice Dragon Castle				

Dwelling Banks

They are a type of Creature Bank, where you fight for pseudo-dwellings to get the corresponding units plus resources that said units cost after victory. It won't be listed below because the list will be incredibly long, but the formula is always the same:

Dwelling Bank level	Guards	Reward in resources	Reward in units	Replacement probability	Accumulation guards ratio	Accumulation rewards ratio	Revisit
Level 1	4x (same stack number as originally recruited)	The double amount it costs to recruit a full stack	The same amount that is available to recruit	50%	100%	100%	Every 7 days
Level 2	4x (same stack number as originally recruited)	The double amount it costs to recruit a full stack	The same amount that is available to recruit	50%	75%	100%	Every 7 days
Level 3	4x (same stack number as originally recruited)	The same amount it costs to recruit a full stack	The double amount that is available to recruit	25%	50%	50%	Every 7 days
Level 7	4x (same stack number as originally guard being 3)	The amount it costs to recruit to 75%	1x (accumulation creature base)	5%	100% (1x by each stack)	25%	Every 28 days

The project will announce the following levels when they become available in future updates.

It should be noted that this project will only be limited to SoD Dwellings.

New Artifacts

ID	Name	Class	Slot	Cost in gold	Description
171	 Hammer of Doom	Major	Right Hand	10000	When worn, this massive relic increases your Attack skill by +16, but reduces your Defense skill by -6 and Morale -1

200	Ice 	Major	Left Hand	8000	When equipped, the Ice Shield increases your Defense skill by 3 and makes your units immune to Cold spells.
201		Minor	Ring	6000	Wearing this item renders your units immune to the Lightning Bolt spell.

202	 Crossbow	Relic	Misc	10000	When equipped, the Crossbow upgrades your Archers, Marksmen to Crossbowmen and Cavaliers to Archer Rider, and provides you with 10 additional shots.
203	 Strong Armor	Relic	Torso	10000	When equipped, the Strong Armor increases your Power skill by 4 and makes your units immune to the Explosion and Disruption Ray spells.
204	 Ionized Armor	Relic	Torso	12000	Wearing this item renders your units immune to all offensive Air spells.
205	 Green Armor	Relic	Torso	12000	Wearing this item renders your units immune to all offensive Earth spells.
206	 Chilled Armor	Relic	Torso	12000	Wearing this item renders your units immune to all offensive Fire spells.
207	 Streamline Armor	Relic	Torso	12000	Wearing this item renders your units immune to all offensive Water spells.
208	 Ring of Precision	Major	Ring	6000	When equipped, this ring casts Precision on all friendly shooters at the beginning of each combat.
209	 Ring of the Thousand Storms	Major	Ring	7000	When equipped, this item casts Haste at the beginning of combat on all your units.
210	 Shield of the Dark Paladin	Relic	Left Hand	9000	Increases your Defense skill by +6 and casts Death Ripple at the beginning of combat.
211	 Arrow Quiver	Minor	Misc	2000	Grants a 20 additional shots to all your shooters at the beginning of combat.

212		Minor	Misc	3000	Wearing this item renders your units immune to the Slow spell.
213		Minor	Left Hand	3000	Increases your Defense skill by 2 and casts Air Shield at the beginning of combat on all your units.
214		Minor	Ring	4000	Casts Shield at the beginning of combat on all your units.
215		Major	Ring	5000	Casts Fire Shield at the beginning of combat on all your units.
216		Minor	Left Hand	2000	Increases your Defense skill by 3 and casts Stone Skin at the beginning of combat on all your units.
217		Minor	Left Hand	3500	This left handed item increases your Attack skill by +2 and casts Bloodlust at the beginning of combat on all your units.
218		Relic	Misc	13000	When equipped, Gelu's Bow upgrades your Wood Elves and Grand Elves to Sharpshooter Elves, and provides you with 10 additional shots.
220		Relic	Right Hand	30000	This rod increases your Attack, Defense, Knowledge skills by 3 and your Power skill by 6. It gives the hero Lightning Bolt and Chain Lightnings spells in your spellbook. Provides Lightning immunity. Each stack hit by the Chain Lightning spell, gets an additional hit by Thunderbolt.

221		Minor	Head	3500	Increases hero defense skill by 3 and renders units immune to defence-reducing spells.
222		Minor	Misc	2500	At the beginning of battle casts expert Landmine.
223		Treasure	Misc	750	Allows to upgrade all Mages, Archmages, Monks and Zealots in your army to Liches.
224		Major	Right Hand	5000	Held with the right hand, Sacred War Hammer casts expert Bless at the beginning of battle.
225		Major	Head	3000	Increases your knowledge skill by 5 and renders units immune to Hypnotize and Forgetfulness.
226		Relic	Right Hand	15000	Increases hero's spellpower skill by +12.
227		Treasure	Misc	4000	Summons scary Demiliches to help you in the battlefield.
228		Minor	Misc	6000	Summons scary Demiliches to help you in the battlefield.
229		Major	Misc	8000	Summons scary Demiliches to help you in the battlefield.
230		Relic	Misc	10000	Summons scary Demiliches to help you in the battlefield.
231		Relic	Right Hand	50000	Held with the right hand, the Black Luster Sword increases all four primary skills by +5. Summon Archangels on the battlefield. Cast Mirth on your

					units.
233	 Scepter of Magic	Relic	Right Hand	20000	Held with the right hand, Scepter of Magic increase your Power and Knowledge by +20.
234	Axe  of Might	Relic	Right Hand	20000	Held with the right hand, Axe of Might increase your Attack and Defense by +20.
235	Sun  Emperor Chainmail	Relic	Torso	35000	Increases all four primary skills by +5.
236	 Vermilion Bird Shield	Relic	Left Hand	40000	Increase your Attack, Defense and Power skill by +7 and Knowledge by +4. Summon Vermilion Birds on the battlefield.
237	 Crown of the Fire King	Relic	Head	25000	Increases all four primary skills by +5. Renders your units immune to all damage Fire spells.
239	 Pendant of Magic	Minor	Neck	3000	Wearing this item renders your units immune to the Magic Arrow spell.
240	 Regenerative Necklace of Mana	Minor	Neck	4000	This necklace helps you recover 5 extra spell point per day.
241	 Bucket Helmet	Major	Head	8000	This weird helmet reduces your Defense skill by 2 making your units immune to all Mind Spells.
242	 Field Martial's Ring	Major	Ring	4000	When worn, the Field Martial's Ring increases your Morale by 3.

243	 Horseshoe	Major	Misc	3000	When equipped, the Horseshoe increases your Luck by 2.
244	 Crystal Glyph	Relic	Misc	10000	When equipped, this item casts Magic Mirror at the beginning of combat on all your units.
245	 General's Order	Minor	Misc	3000	When worn, the General's Order increases your Morale by 2.
246	 Ring of Fortune	Major	Ring	3500	When worn, the Ring of Fortune increases your Luck by 3.
247	 Mithril Cuirass	Major	Torso	7500	When worn, this armor increases your Power and Defense skill by 6.
248	 Mithril Helmet	Major	Head	7500	When worn, this helmet increases your Knowledge and Defense skill by 6.
249	 Misfortune Ring	Major	Ring	4500	Worn on the finger, the Misfortune Ring reduces enemy's Luck by 3.
250	 Dragon's Head	Minor	Misc	4000	When equipped, this item reduces enemy's Morale by 2
251	 Panic Ring	Minor	Ring	3000	Worn on the finger, the Panic Ring cast Sorrow in all enemies.
252	 Pendant of Despair	Major	Neck	9000	Worn about the neck, the Pendant of Despair reduces enemy's Morale and Luck by 3.
253	 Ring of the Snake Eyesight	Relic	Ring	10000	Puts a most susceptible enemy stacks under your control at the beginning of the battle.

254		Major	Left Hand	6500	Increases your Defense skill by +6 and casts Exorcism at the beginning of combat on all enemy undead.
255	Axe  of the Piedmont King	Major	Right Hand	8000	Increases your Attack skill by 5 and casts Counterstrike at the beginning of combat on all your units.
256		Minor	Ring	5000	When equipped, this item casts Anti-magic at the beginning of combat on all your units.
257		Major	Misc	6000	When equipped, this item casts Bless at the beginning of combat on all your units.
260		Major	Feet	5000	Worn on the feet, allows your hero to move over rough terrain without penalty.
261		Relic	Shoulders	20000	When worn, the stats of the allied hero and enemy hero are reversed.
262		Relic	Misc	35000	With this powerful amulet, it allows you to cast resurrect all friendly creatures.
263		Relic	Ring	25000	When casting implosion, the damage of implosion is reduced by 60%, but it is cast on all enemies.
264		Relic	Right Hand	15000	When worn, this mysterious sword sets the lowest value of Attack and Defense to the highest value.

265	 Atma Robe	Relic	Shoulders	15000	When worn, this mysterious robe sets the lowest value of Power and Knowledge to the highest value.
266	 Horn of the Abyss	Relic	Misc	50000	After a stack of living creatures is slain, a stack of Fangarms will rise in their stead and will stay loyal to the hero after the battle concludes. Total Hit Points of this stack will be equal to half of the slain stack's total Hit Points, but quantity of the Fangarms summoned thus should not exceed half of quantity of creatures in the slain stack. Slaying Fangarms will not trigger the Horn effect.
267	 Cape of Silence	Major	Shoulders	7500	While wearing this cape, neither you nor your opponent will be able to cast level 1-2 spells during combat.
268	 Ring of Oblivion	Major	Ring	7500	This artifact reduces the Power skill of enemy hero by 10% during combat.
269	 Charm of Eclipse	Minor	Misc	5000	This artifact reduces the Power skill of enemy hero by 10% during combat.
270	 Seal of Sunset	Minor	Ring	5000	This artifact reduces the Power skill of enemy hero by 10% during combat.
271	 Plate of Dying Light	Major	Torso	10000	Worn on a torso, this item reduces the Power skill of enemy hero by 25% during combat.

272	 Endless mug of happiness beer	Minor	Misc	3500	This artifact casts Mirth to the expert level at the beginning of battle.
273	 Eye of the Green Dragon	Relic	Misc	25000	This powerful dragon eye increases the minimum damage by +1 and allows Baby Green Dragon to be upgraded to Green Dragon and become Bone Dragon and Ghost Dragon into Green Dragon the next day.
274	 Eye of the Red Dragon	Relic	Misc	25000	This powerful dragon eye increases the maximum damage by +1 and allows Baby Red Dragon to be upgraded to Red Dragon and become Bone Dragon and Ghost Dragon into Red Dragon the next day.
275	 Eye of the Faerie Dragon	Relic	Misc	30000	This powerful dragon eye increases the minimum damage by +2 and allows Baby Faerie Dragon to be upgraded to Faerie Dragon and become Dracolich into Faerie Dragon the next day.
276	 Eye of the Rust Dragon	Relic	Misc	30000	This powerful dragon eye increases the maximum damage by +2 and allows Baby Rust Dragon to be upgraded to Rust Dragon and become Dracolich into Rust Dragon the next day.
277	 Eye of the Azure Dragon	Relic	Misc	35000	This powerful dragon eye increases the minimum and maximum damage by +2 and allows Baby Azure Dragon to be upgraded to Azure Dragon and become Dracolich into Azure Dragon the next day.

New Combo Artifacts

An easy way to know the artifact sets for combos, it is enough to right click on the backpack button, and a frame will be displayed with all the combinations of the new combos.

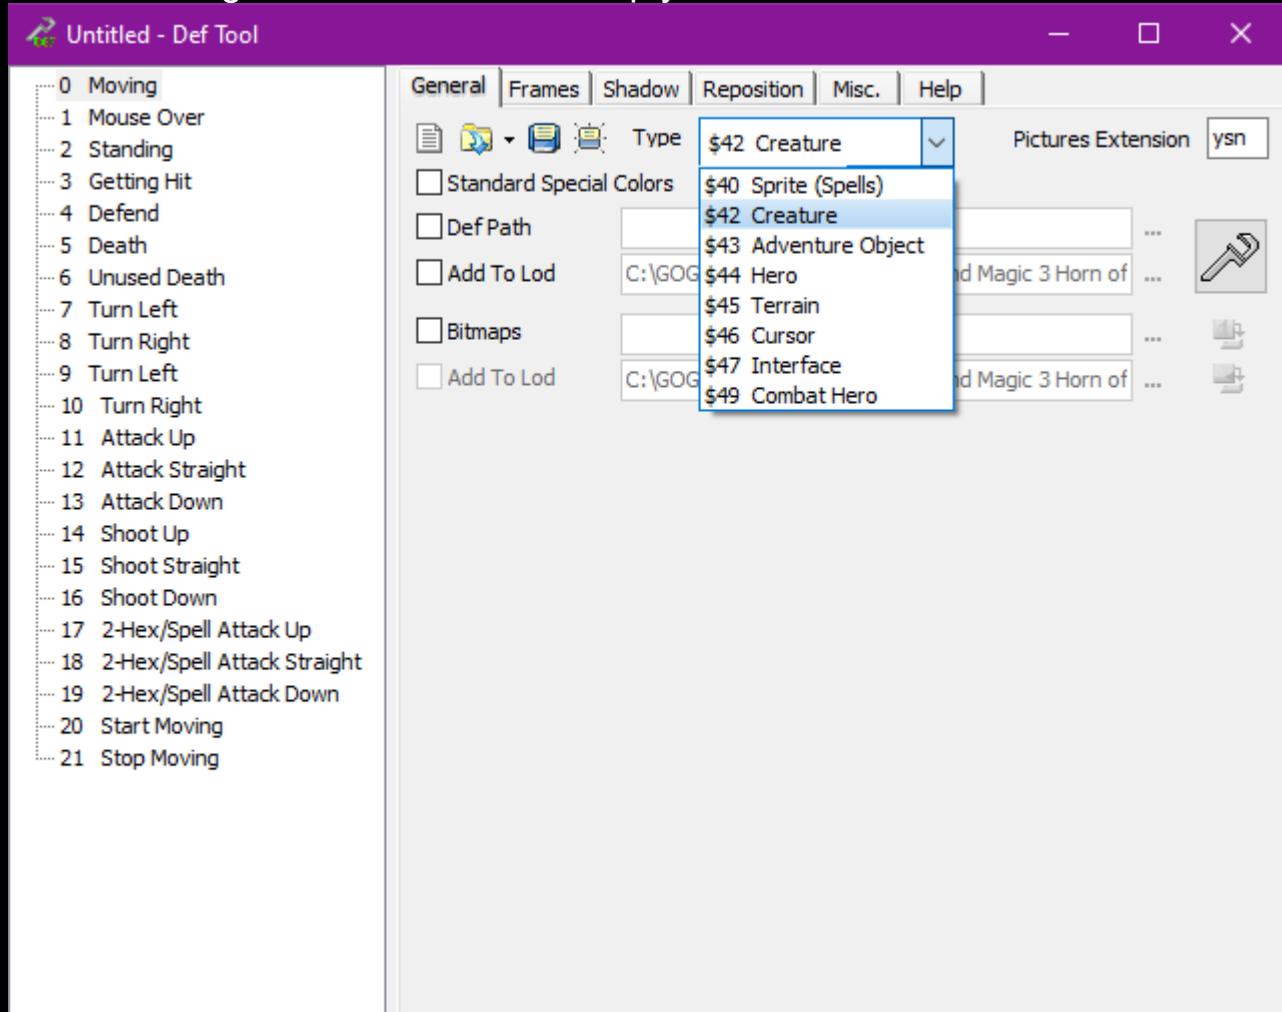

ID	Name	Cost in gold	Description
179	Golden Goose	22500	In addition to component effect when equipped, the Golden Goose increases your income by 4750 gold per day.
180	Diplomat's Cloak	15000	In addition to component effect the Diplomat's Cloak multiplies your hero army strength by 3 (for neutral armies and Thieves guild).
181	Pendant of Reflection	12000	In addition to component effect this item increases your chance to resist a hostile spell by 20%.
182	Ironfist of the Dark Paladin	55000	In addition to components effects, at the beginning of combat the Fist will cast Haste, Bloodlust, Fire Shield and Counterstrike (all Expert) lasting for 50 turns on all allied troops.

219		80000	In addition to component effect, at the beginning of each battle the Compendium of Magic summon all four third upgrades elementals.
232		100000	In addition to components effects, at the beginning of combat Apocalypse's Blade cast Armageddon at the beginning of the battle.
238		30000	This orb doubles damage done by combat spells and casts all four magic protection spells on your units.
258		24000	At the beginning of each battle the Hell Baron's Gloves will cast Slayer and Frenzy spells on all your creatures. Each unit of yours gains a Fire Shield effect.
259		30000	All creatures in the hero's army, excluding the attackers on 2 cells, are endowed with the hydra skill.
278		120000	This omnipotent artifact increases the minimum and maximum damage by +5 and allows Baby Red and Green Dragons to be upgraded to Fire Dragon, Baby Azure Dragon to Ice Dragon, Baby Faerie Dragon and Baby Rust Dragon in their third upgrade form the next day.

5. How to create new creatures and dwellings in TUM

From scratch being an artist

It all starts with a .def file that stores the graphics and frames of the creature, which it's called "battledef". It is the most important thing to learn to make a creature in a game. "Def Tool" can help you with that.

You must select type "**\$42 creature**" to start making your first creature.

But as the subtitle indicates, to really make a creature from scratch and original, you need to know the following:

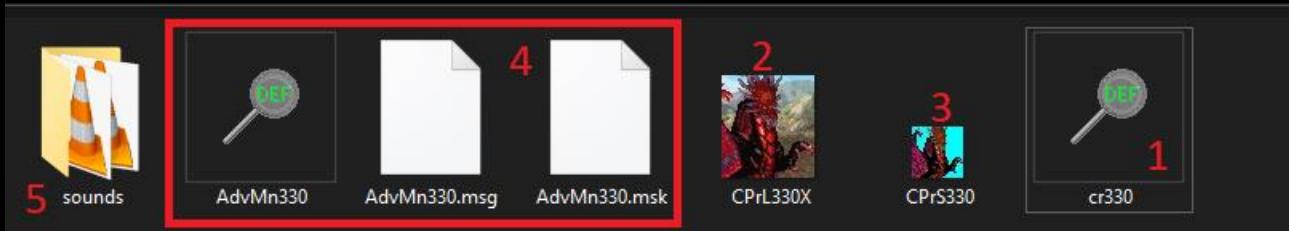

- * Use 3D modeling tools like Blender.
- * Have knowledge of how you want to create a creature.
- * It is suggested that the background be cyan (#00FFFF).
- * Avoid using frame animation 6 (Unused Death) and in case of using it to be exactly frame animation 5 (Death).
- * Frames must be 450x400 in size.

More information about how to use def tool in the "Help" tab within the same software.

From scratch without being an artist

You can create your own creature more quickly if you have a pre-made battle def.

Now we go through the essential files a creature needs:

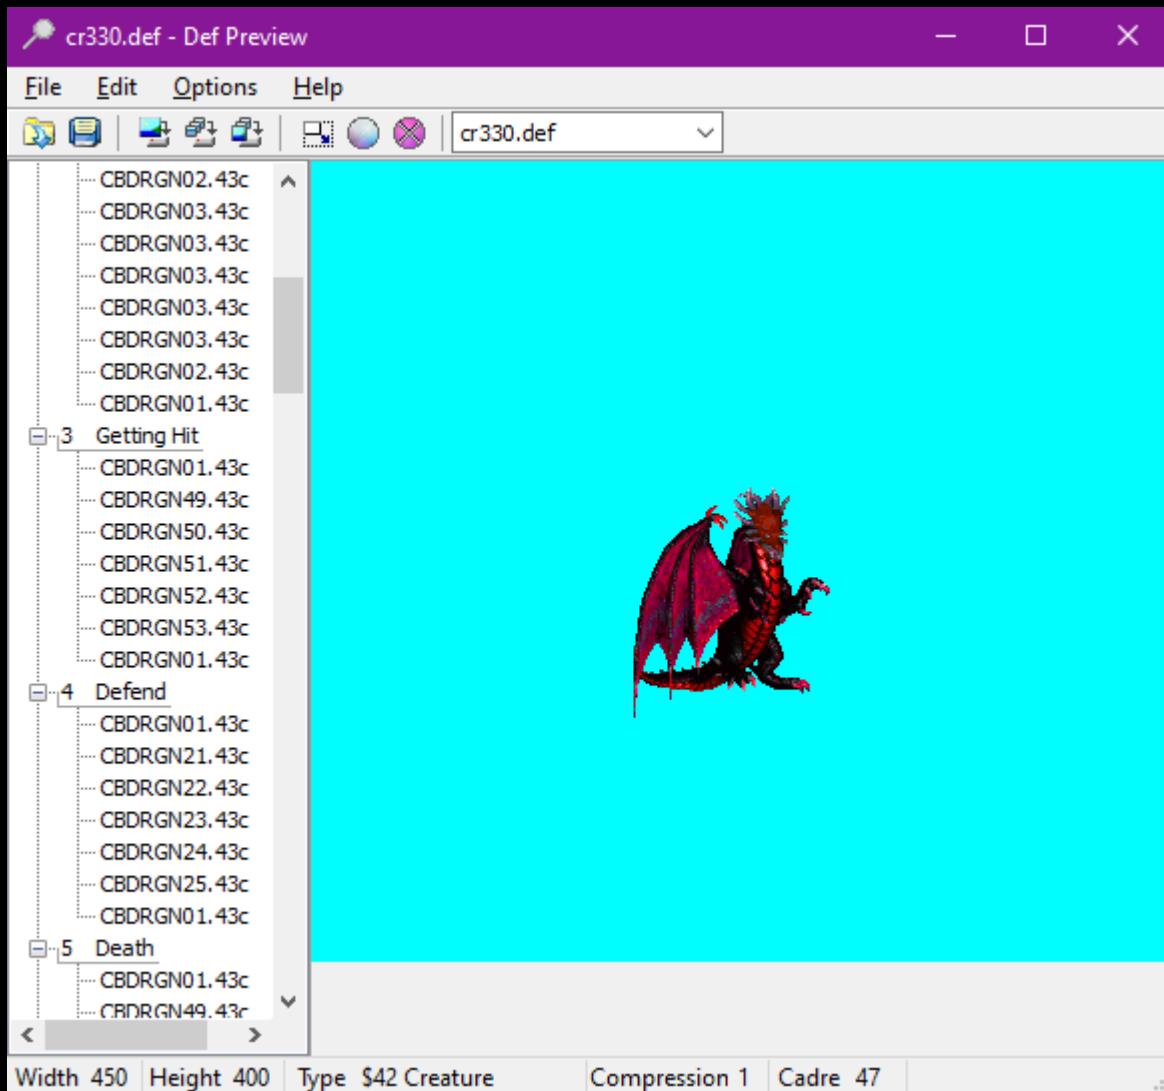

It's recommended to put numbers to the files of the creatures like in the screenshot, not only for order, but also to recognize the ID of the creature, which in this case will be #330. (**Clarification, if your creature will be a shooter, you must include a def called "SHOT330" in this case**).

1. Battle def: As I mentioned before, everything starts with this file, you can extract it from the original game files or from some other mod, I also suggest looking for it on this page where many types of battle def are stored so you can start making your own creature.

2. Large portrait: This will be the image you should have added in twcprport.def of TUM, to create it you will need this set of factions frames:

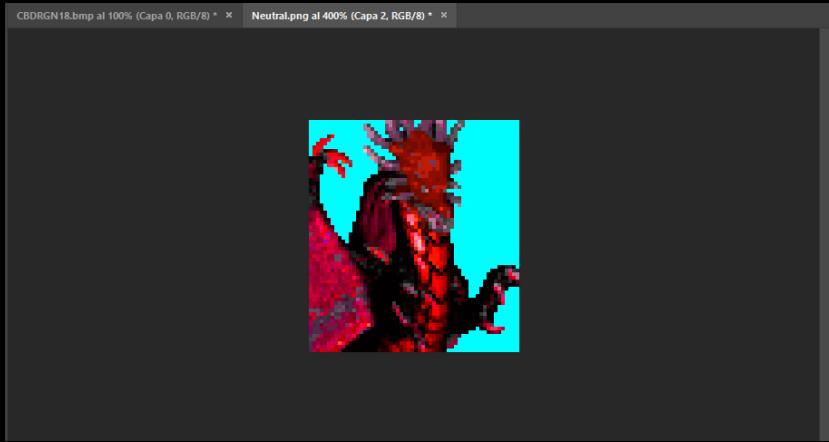

You can crop them, but make sure they are 58x64 in size.

To have your large portrait first you must look in your battle def for an image that fits well as a portrait, but if it's in profile there is no problem, I will extract this image.

Then open Photoshop with your faction portrait and the frame of your creature (There are some times that the image of the creature will be indexed and cannot be modified, to change that go to image -> mode -> and change "indexed color" to "RGB color".)

Then drag the image of your creature to the faction portrait and it will look like this.

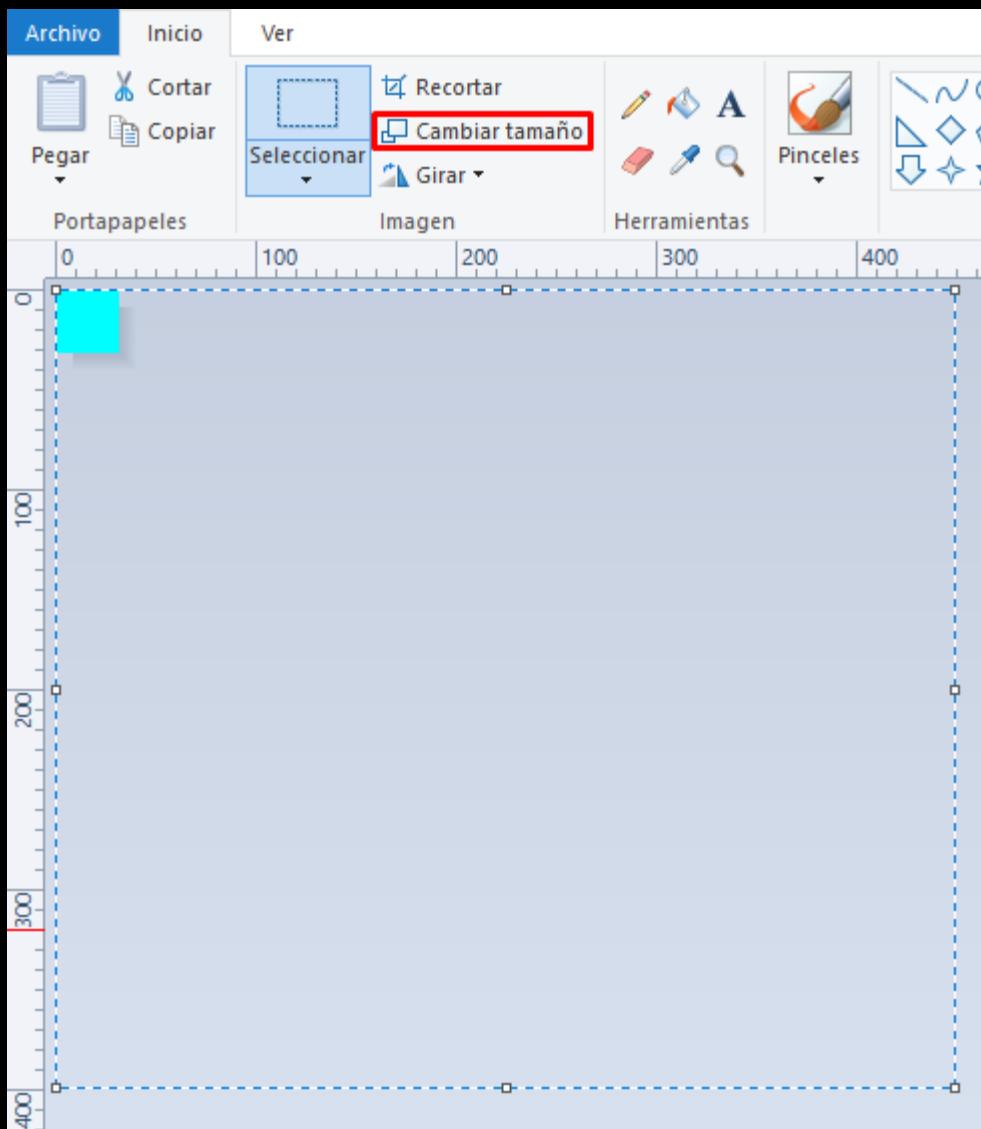

To remove the cyan background is very simple, there are several options, but the most common are: magic wand, quick selection or lasso. Of all of them, I recommend using lasso to be as precise as possible, once the cyan backgrounds are marked, it only remains to delete it and the image will remain as in the preview.

Make sure to re-index the image so as not to lose the color quality, save in 8bit .bmp format and this is ready.

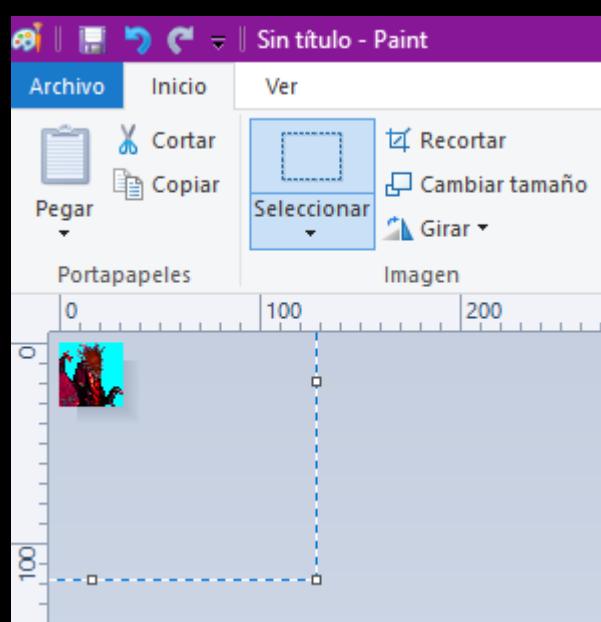

3. Small portrait: It is similar to large portrait, but it is easier. You can do it in Photoshop but this time I will teach you to do it in Paint.

Let's use the same image of the previously extracted creature. Once you have opened paint, make sure your canvas is 32x32 in size.

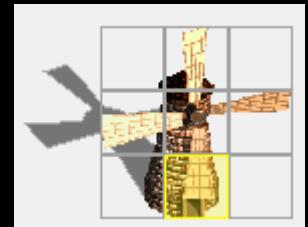

Ok, now what you have to do is give "select all" to your canvas, in paste, go to "paste from" to find the frame of your creature and select. When your frame is like this, click to "resize".

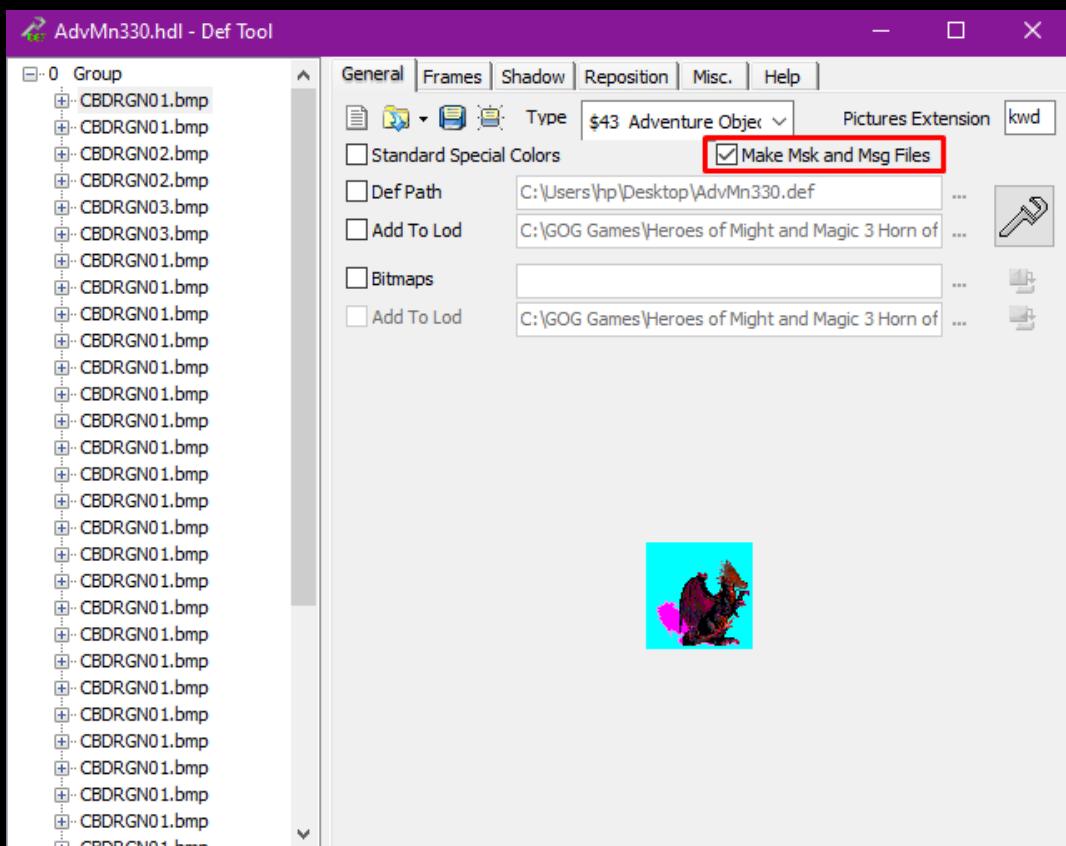

To make it easier, reduce the percentage size to 50:50, drag the image onto the canvas, and you're done. Make sure to save it in 8 bit .bmp whenever possible.

4. Adventure object files: Before starting the elaboration, I must teach about this type of files, the second most abundant def class is "\$43 Adventure Object", this type of graphics will always be all the ones you see in the map exploration, from trees, rocks, to even any kind of uneven surface on the ground where the hero walks. It is made up of 3 files, **.def** which is simply the graphic, **.msk** is the mask of the objects (passability of the objects) and **.msg** is an additional mask by WoG, designed to be able to manipulate the passability and the surface of the creature in map editor, like this:

To create an adventure object of a creature, the process is similar like small portrait, except that the canvas must have a size of 64x64, for your creature to be animated on the map I recommend extracting all or a few images from frame animation 2 "Standing", and to make it look fluid, repeat the same image several times.

Once you have done that, do not forget to check this box to automatically have **.msk** and **.msg**.

5. Sounds: For Third Upgrades Mod (more specifically amethyst), sounds must be listed by ID compulsorily, or else they won't work. These sounds must go inside a .snd file. It is very likely that the game tells you that a creature doesn't have a shoot sound if it doesn't add to it, even if it doesn't shoot, so it is best to use a mute sound as a filler. The sounds must start with the letter "S" + number of the creature + sound type, in this case "shot": SxxxSHOT.wav

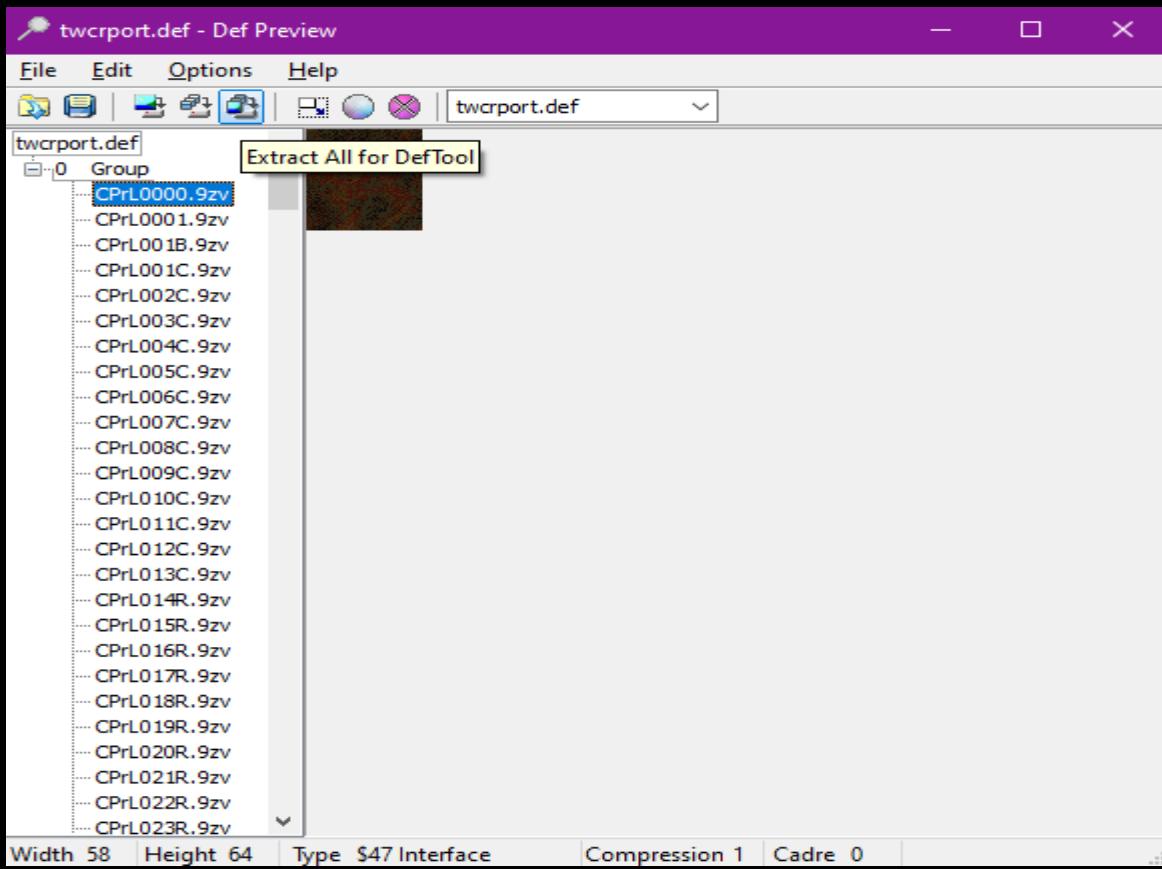

Make no mistake, sounds must have an 8 characters name, of which 4 for the sound type: ATTK, DFND, KILL, MOVE, SHOOT, WNCE.

Steps to introduce your creature to the game

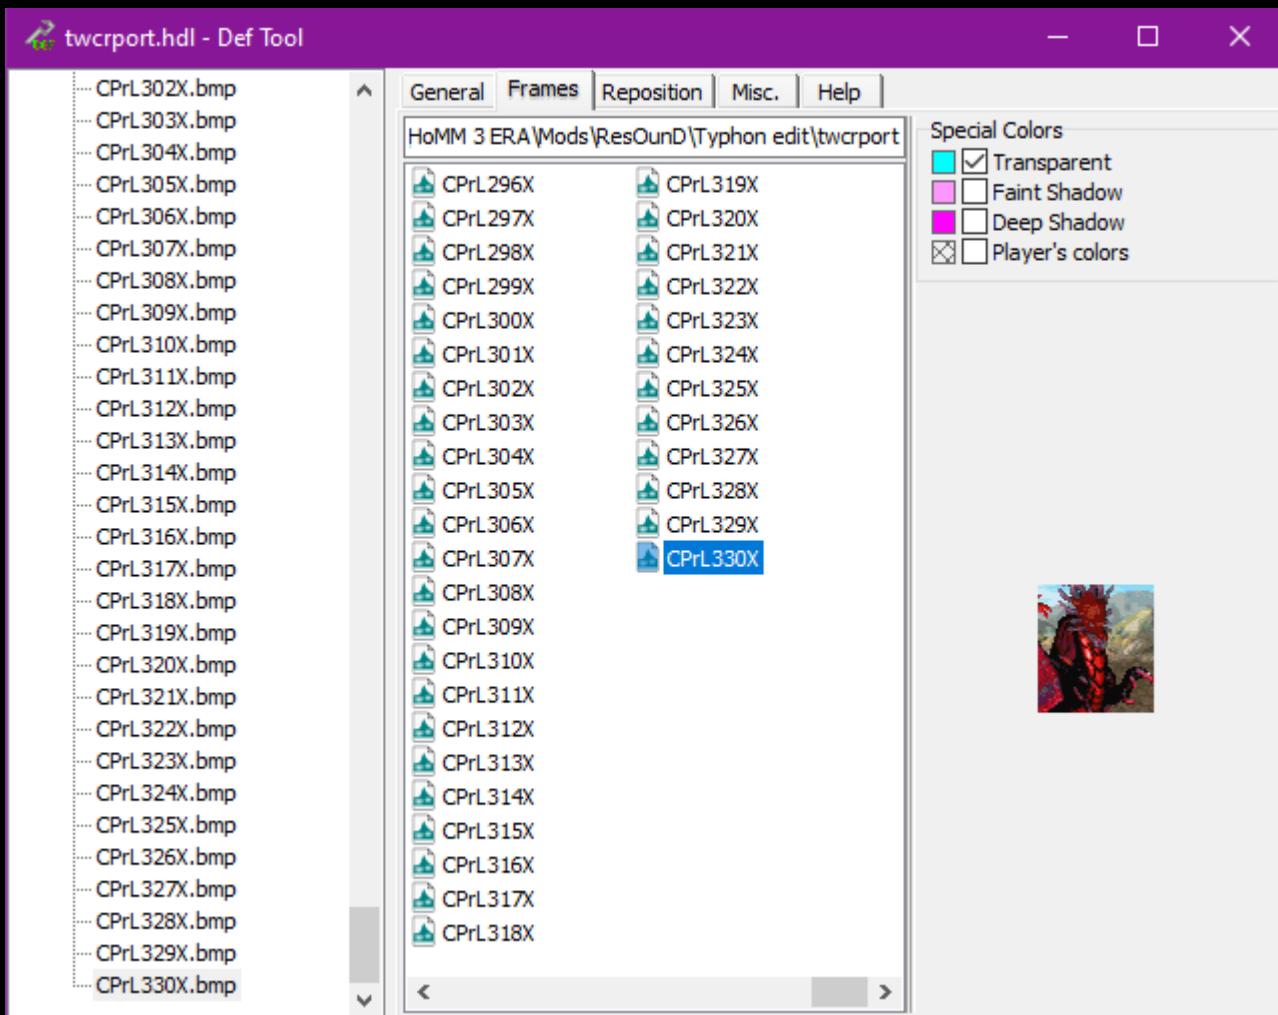

The first thing you should do is drag your battle def and your map creature files (advmap def, msk, msg) to AmeCre.pac when you have opened it with MMArchive and your sounds in AmeCre.snd.

For your portraits you must first extract twcrport.def (for large portrait) and cprsmall.def (for small portrait) respectively. Once extracted, open them with Def Preview tool, and then extract the frames with the button "Extract All for DefTool", it is recommended to extract everything in an empty folder for each def.

Now
drag
your

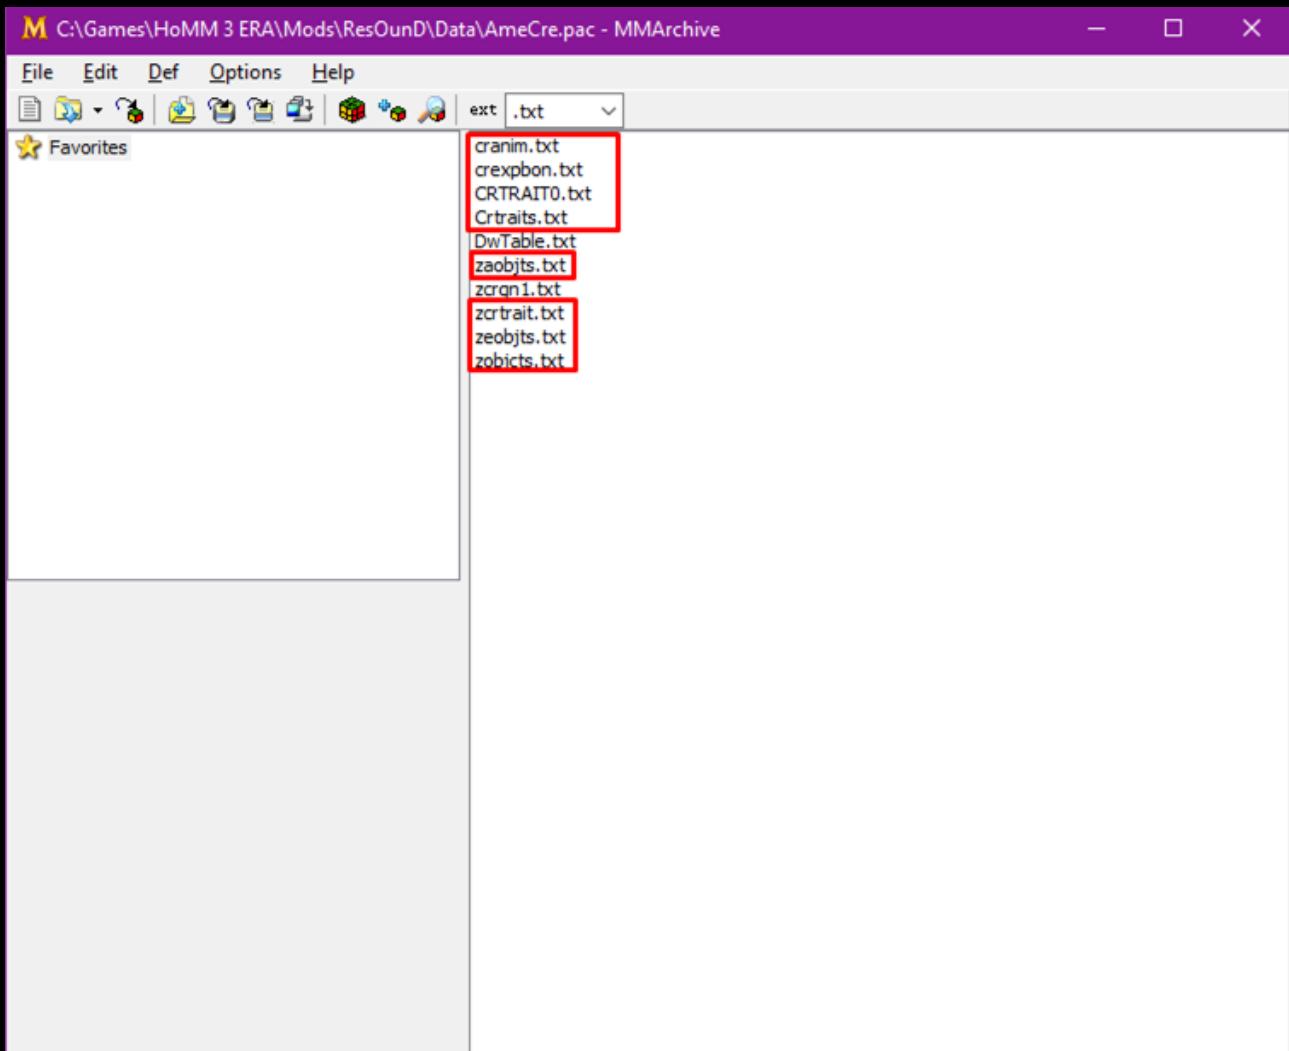

portraits into their respective folder, once this is done, open twcrport.hdl or cprsmall.hdl that has been created when the frames were extracted, you will see all the frames already put together, now what remains to be done is go to the "frames" tab and add your portrait to the end of the list, in this case "CPrL330X". Now click on the "Make def" button with the path already set to apply changes and that's it.

Make sure to do the same with your small portrait, if the portrait has a cyan background it means that the color of the cyan background is not correct or it's not the format .bmp 8bits, check that.

The portraits defs will be ready to be loaded to Amecre.pac again.

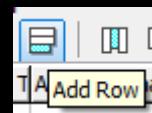

The next step is to modify the texts of the creatures, so far you have only created the empty body of your creature, but these text files are what will give it life. Extract the following text files to modify them with "Text Tables Editor" tool:

For now these texts from files you have to extract them for your creature, the rest is for dwelling of your creature which will be explained later in the guide.

cranim.txt: This text file sets the animation speed and shooting angles. It is important to get it right or else the game will crash.

It's mandatory that there are 6 empty rows in the text or the game will crash, you must create a seventh row, in which you will add the animation of your new creature, press the "Add Row" button to do so.

In order not to do a complex job, I suggest copying the animation made of a similar creature, in this case "Black Dragon" and pasting in the empty row below. Save and done.

Crtraits, CRTRAIT0 and zcrtrait: They are 3 text files that are exactly the same, but they must be included because originally they worked differently; **Crtraits** was the first creature traits file and works for the core of Restoration of Erathia, the second **CRTRAIT0** was for Armageddon Blade and Shadow of Death which included creature traits that were not implemented in RoE, and the last **zcrtrait** is from WoG. With Amethyst, the 3 files must be as WoG, they must be complete and none must be different. Adding stats and other traits to your creature is simple, you just have to open one of the 3 with "Text Tables Editor" and write the general parameters that you want.

zaobjts, zeobjts and zobjcts: These files are the main base for your adventure objects to exist in the game, if you don't write the line of your objects in these text files it will be useless to have them in a .pac. Although files are similar, they fulfill different roles; in **zaobjts** case, it is used for random map generator to put these objects on the generated map (zaobjts is a very volatile text file, so I recommend modifying it at your own risk if you want to introduce complex objects). **Zeobjts** is the main file for your objects to exist in map editor, if you don't write your objects in zeobjts you won't be able to use it in map editor. **Zobjcts** is a file similar to zaobjts, but it does not work for the random map generator, but for maps in general, this file puts ingame collisions on existing objects.

To modify those files it is not necessary to use "Text Tables Editor", using notepad will be enough in this case. I'll show you the characteristics of these text files so that you can manipulate them beyond just introducing creatures in game.

It's more secure and basic to modify zeobjts.txt, so I recommend starting there.

The structure begins with an index number that indicates how many lines are written, in the 3 files they will be different, not all the objects can be entered in the 3 text files at the same time, but they can always be included in zeobjs, in zaobjs there may be problems and high chance that very specific objects are not spawned, so they are not usually listed there.

For our creature to be generated on the map and in map editor, it has to be written in the 3 text files, this will be its line:

As you may have noticed, it has the same name as the creature's map graphics, and that's for the object to be integrated and the game can detect it. (Don't forget to increase the numerical index every time you add an object, now that you've added a new row, it increases to 1987).

Some columns will be made up of binary numbers (zero and one) in which 0 means unmarked and 1 marked (only in the case of blue and pink).

What is the difference between text file objects and msk, msg?
In the case of .msk and .msg they give the body of the passability, and text files like zeobjts are in charge of giving life to those passabilities, these files are used to give functions to the objects. You can modify the effect of passability with "Object Editor", a powerful tool for those text files.

The lines are shaped according to the color set in the example:

Green: Def name.

Red: Solid object (cannot be traversed).

Yellow: Object entry.

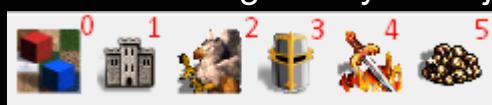

Blue: Type of Terrain, for zeobjts and zobjcts it is in what kind of terrain the object can be placed in map and about zaobjts on what kind of terrain will be generated, this is easily modifiable with Object Editor.

Pink: Type of Landscape, it's usually used to organize map editor objects by terrain, for this to be enabled, "Other" checkbox must be selected.

Cyan: Object type, using Object Editor, it tells you the name of the object type you chose, in this case it's type 54, which is for creatures.

Brown: Object subtype, it is the ID of the object, normally the subtype is used in objects of the same type but with different attributes, for example artifacts or monsters that in this case our ID is 330.

Gray: Object Place, It's the place where the object will be located in map editor, for example, if it's marked as "2" it means that it will appear in the "monsters" section. Code number to organize your objects in map editor would be like this:

White: Position of Object, 0 means "Above Object" and 1 "Under Object", this works to indicate if the object will be superficial, or can be hidden under traversable objects (Like Evil Fog or Magic Clouds).

For more information about objects and the use of Object Editor, go to the section About -> Help, in the software of the software itself.

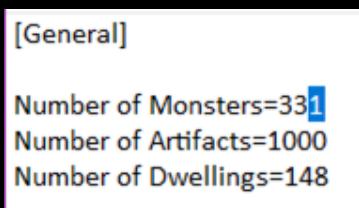

crexpbon: This text file is not required, but if you want your creature to have abilities in stack experience you can add up to 8 types of abilities to your creature. You can copy the row of abilities of other creatures for reference, you just have to change the ID of your creature in the first column (330). But if you want to know more how to make an original ability you can watch this **thread** and learn the indexes of the ability types and their modifiers (ignore the scripting, just focus on the colored list).

When you're done with the text files, don't forget to reload them in AmeCre.pac

You're already close to finishing your creature, but even without using the amethyst features, you can already test your creature in play and see how it is, but before you will need go to the root folder of TUM (ResOunD) then to the Data folder and open amethyst.cfg with your notepad, and change the number of creatures from 329 to 330.

```
Creatures=330  
DisableNecromancyFeatures=1
```

Save it and then go to MapEdPatch -> options folder and in "Number of Monsters=" do the same, but this time the index is one point higher than in amethyst.cfg, so in this case it will be 331. It's important to do this otherwise the creature may give an error in map editor.

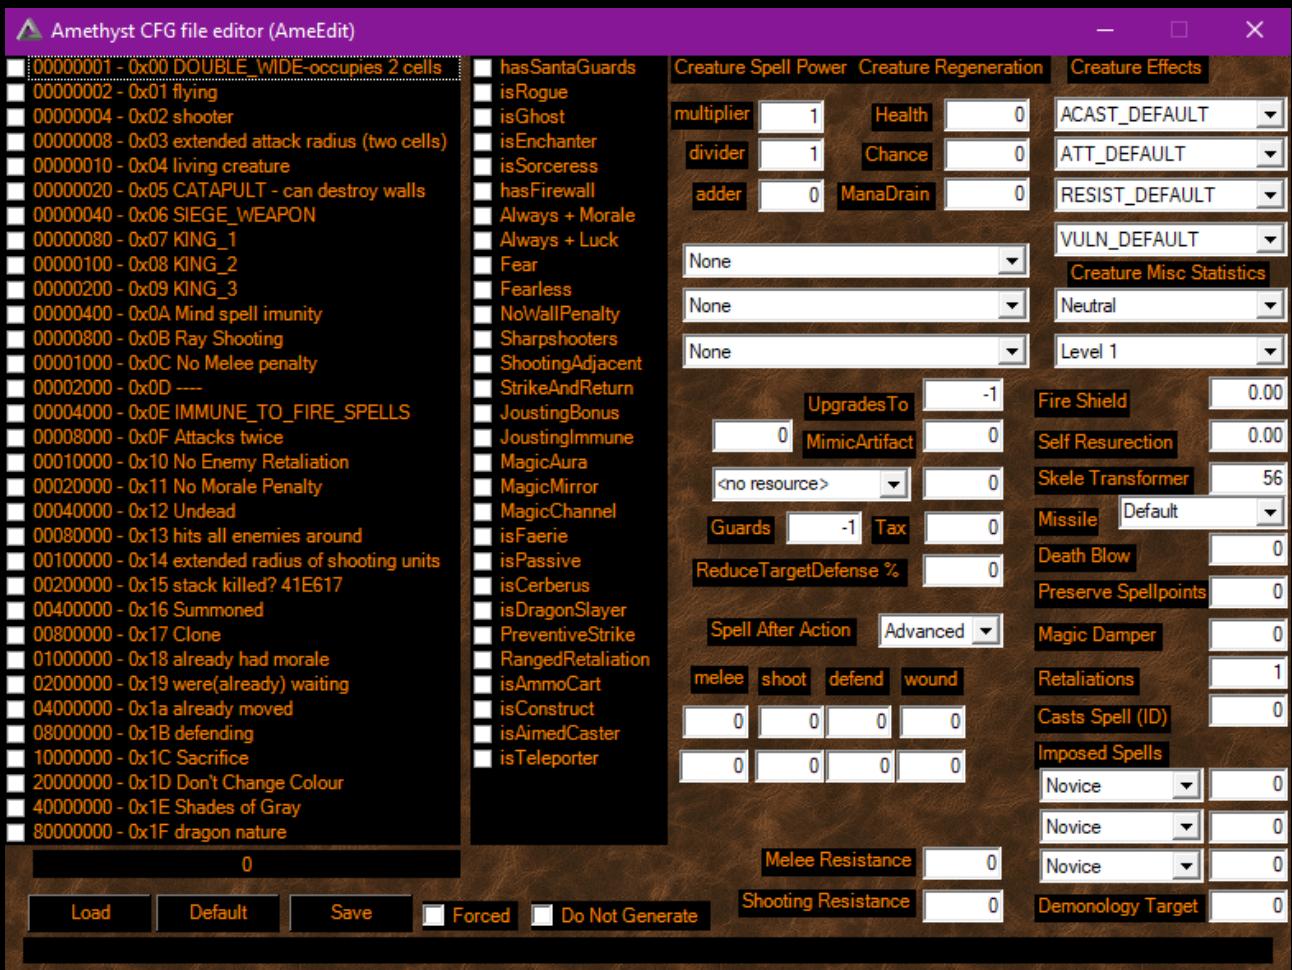

Map editor: If the creature appears in map editor, it means that it has been entered correctly in zeobjts.

If the game runs and doesn't crash it means that your creature has been created correctly and you can go to the last step to finish it completely.

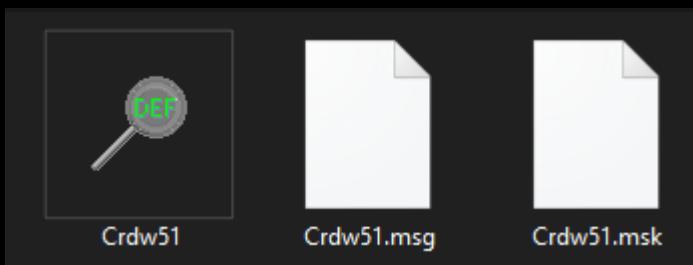

Amethyst and its features

In EraPlugins folder, there is an application called "AmeEdit", this is what is used to give creatures innate abilities. You can experiment with this tool or guide yourself from other creatures' settings to make your own. All the information about each section of abilities in "**AmeEditGuide.pdf**" inside the mod folder.

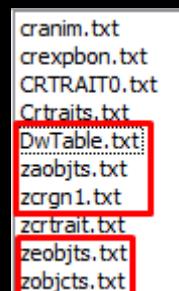

How to create a dwelling for your creature

Creating a dwelling is a faster process than creating a creature, you only need to have your adventure objects ready with .msk and .msg files that any objects on the map will require. The files must go in AmeCre.pac

Now extract the following files to modify them, that the previously used object text files, because they included in map editor and random map generator.

you must includes must be

For text object files, you can simply copy and paste a line that is from an existing dwelling, you will only change the name, and subtype of the object, like this:

Remember that for dwellings, it will always be type 17, and the count increases to 148, if you want to add another dwelling, remember that the next must be 149 and so on.

Now what you need to do is edit **DwTable.txt** with Text Editor.
In DwTables.txt there are 8 columns:

TYPE 17 (one creature): Here you put the name of your individual dwelling (type 17).

Type of creature: There you put the ID of the creatures that you want to inhabit in the dwelling, the name put is an optional indicative.

101 = frames in zlagport.def: They are numerical indices and main ID that represent small frames of dwellings captured in Kingdom Overview (This requires you to add each new frame in zlagport.def).

The other 4 columns are for compound dwellings (type 20), I do not recommend adding new ones as there are limitations in map editor (see the case of Black Tower).

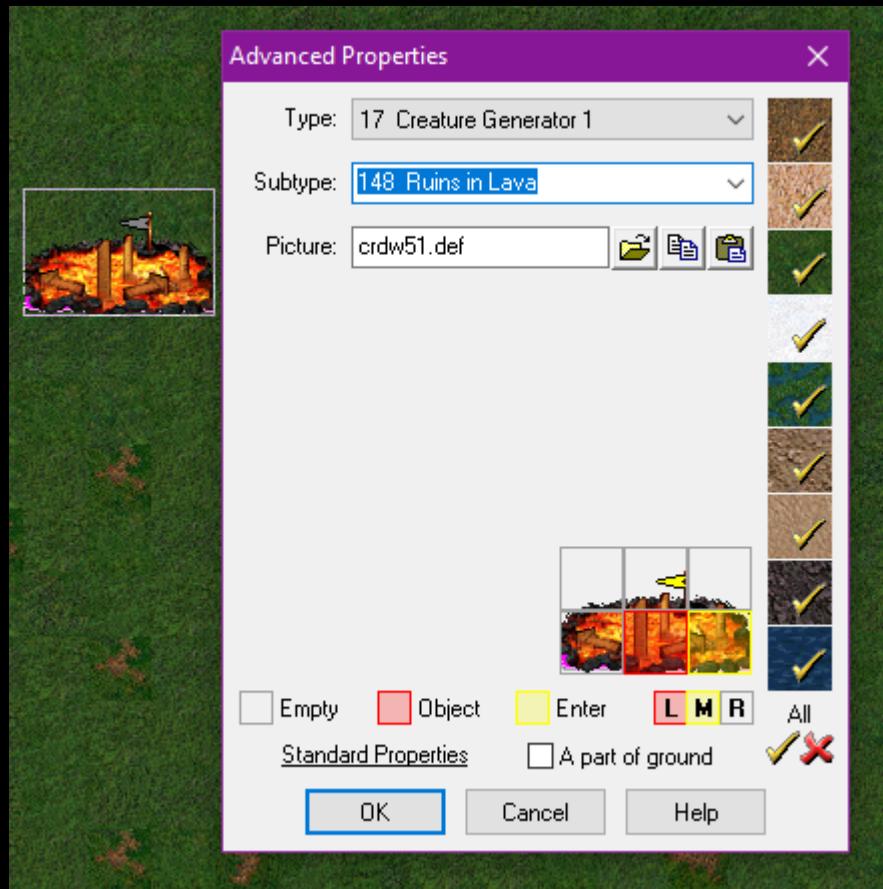

Zcrgn1.txt: In this text file you should only put the name of your dwelling above "Elemental Conflux" or below the name of the most recent dwelling, this is essential for it to work in map editor.

When you finish, reload it in AmeCre.pac like the rest of the files that are necessary.

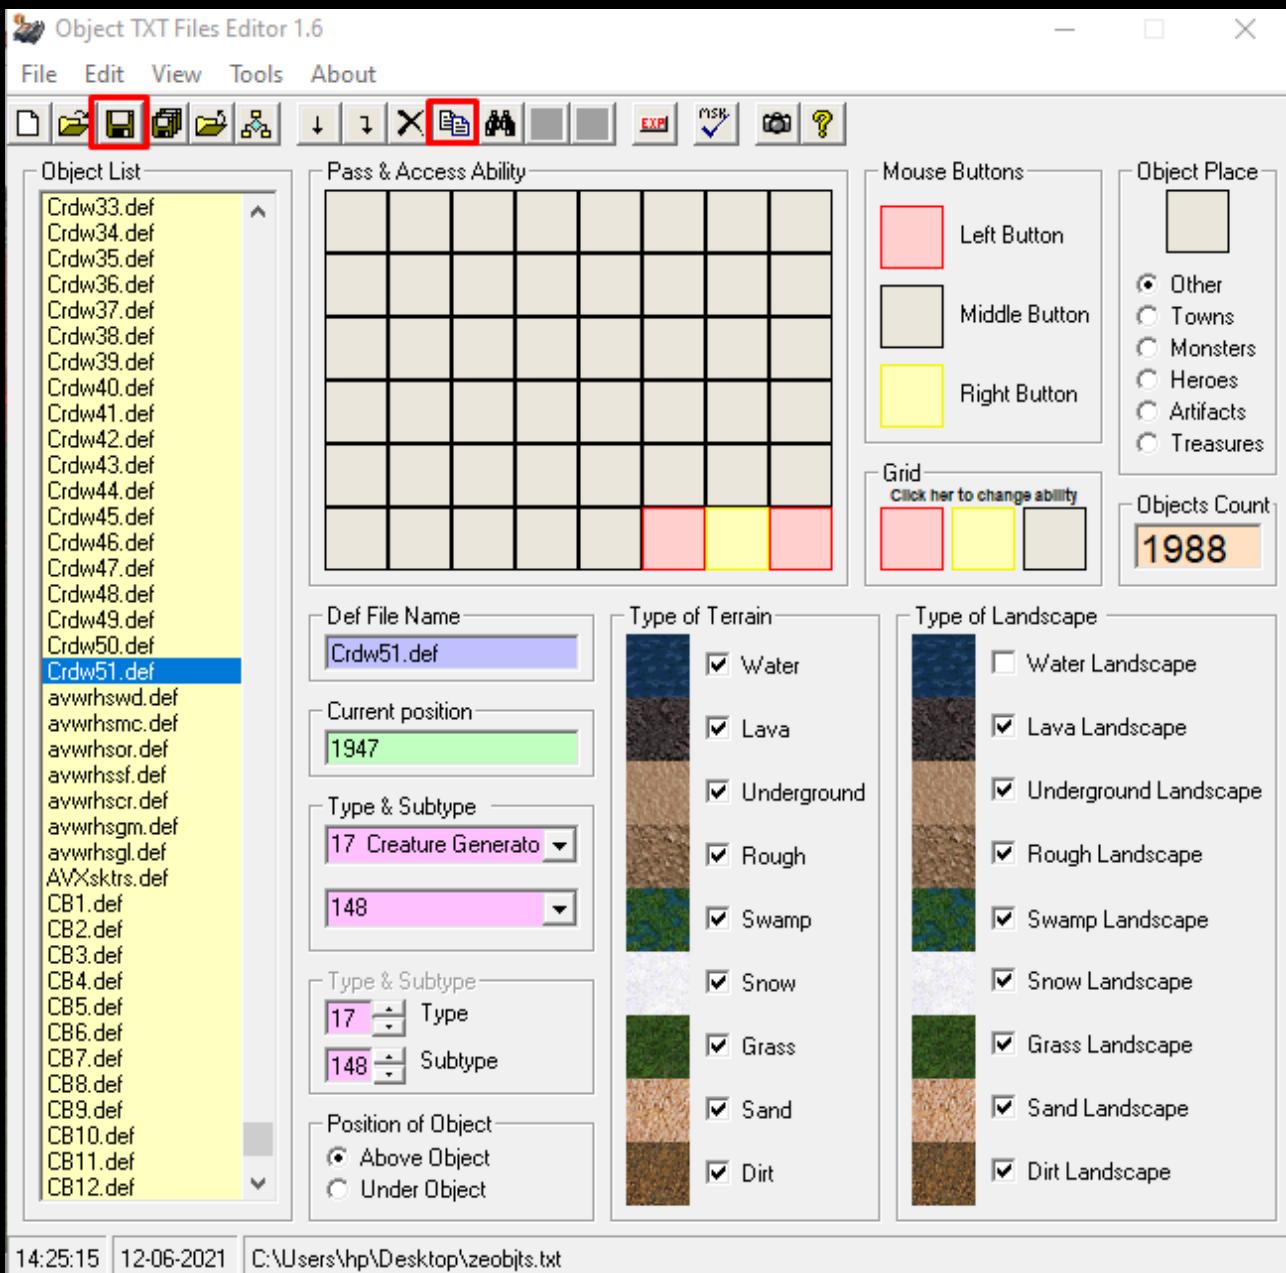

One last step is to go back to MapEdPatch folder and then to options.ini to add one more point to "Number of Dwellings" [General] ="

[General]

If map editor opens and you can put your dwelling on the map it means that you have done everything correctly.

But before finishing, check its passability, if you don't like how it looks you must re-extract zeobjts.txt, zaobjts.txt and zobjcts.txt. Open your text with Object Editor, and then go to the line of your object, and modify it as you wish

14:25:15 | 12-06-2021 | C:\Users\hp\Desktop\zeobjs.txt

When you're done, click the "Save Current Data" and "Save" button, do the same with the rest of the lines, reload it in AmeCre.pac and you will have your dwelling ready.

Bonus: You can also add custom sounds to your objects like dwellings, but this is already completely optional, to do so, you just need to save any sound you want (preferably a loop) to AmeCre.snd

```
337     },

373 }
```

Then open sounds.json in the root folder of the game with notepad (with notepad++ is easier) and make lines just like the ones you see in the image, the name of the dwellings does not affect anything, you just have to focus on name, type and subtype.

Name: Your sound name in .wav

Type: of your object (in this case 17)

Subtype: For this dwellings should be 148.

6. How to create new artifacts in TUM

The steps to create an artifact are faster, everything starts with an image with a 44x44 size cyan background, we will use this as an example:

This image is a frame similar to the creature portraits, this must be sequenced in artifact.def (that and the rest of the files related to artifacts are in EmeraldArtifacts.pac).

Once you extract artifact.def, you will see that the slots are already all occupied by a dummy, so you must replace the unused frame with this one which in this case is called "HrArt272".

Save the def again with def tool and the first part is ready.

Now in order to create an artifact from adventure object, you need to open Photoshop or Paint, and create a cyan canvas of a size of 64x32. Once this is done, drag the frame of your artifact to the canvas that you just made, it will look like this:

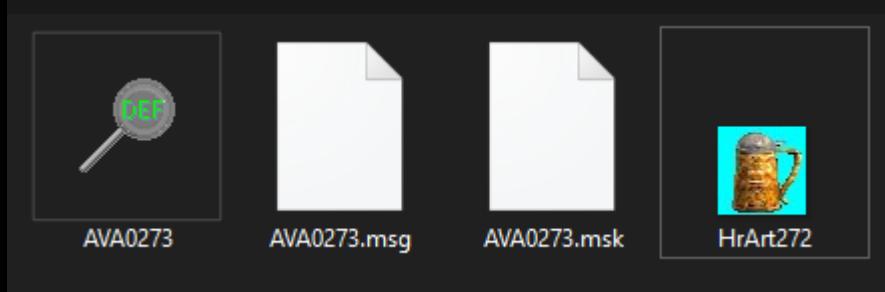

Press ctrl + T to your image to be able to resize and move it as you wish, when you're done, don't forget to index the image and save in .bmp 8 bits.

Now you will need to convert it into an adventure object, open the def tool and start to create the def from scratch, the steps are as follows:

- * Choose type \$ 43 Adventure Object.
- * Go to the "frames" tab and find the 64x32 frame you just made in Photoshop and select it.
- * It is optional, but also go to the "shadows" tab and click to generate so that your artifact has a shadow.
- * Don't forget to check the box to make .msk and .msg
- * You must assign a path for your def in "Def Path", or and give it the name it will have, in this case "AVA0273.def" as a matter of order. (**Important**)

clarification: the name of your object will be a number greater than the frame in artifact.def, but the number of your object on the map is irrelevant, and it is only important in artifact.def if you want to get the ID which is 272).

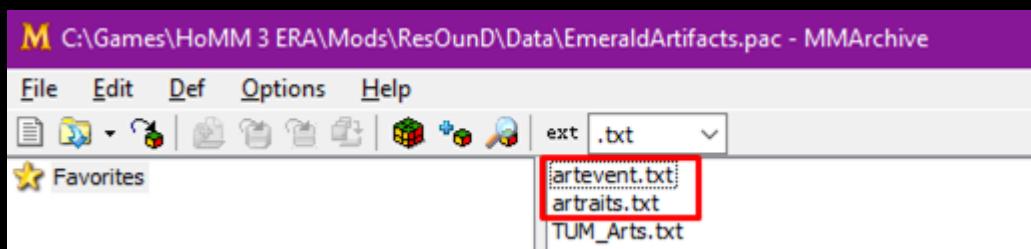

Once all this is done click on the big button to make def.

When you're done you should have these files.

- * Save AVA0273 to EmeraldArtifacts.pac
- * If HrArt272 frame is already included in artifact.def, load artifact.def in EmeraldArtifacts.pac too.

Now you need to edit the texts so that they can exist and work. First go to EmeraldArtifacts.pac and you will see two files:

Artevent: Players who used to play Heroes III before using HD mod will have seen that when you pickup an artifact a message will appear that would be the event or the lore about how the artifact arrived in your hands. This text file has been deprecated since the arrival of HD mod, so it is not necessary to write a lore line on the artifact.

Artraits: Similar to Crtraits and derivatives, this is a file where you can add the basic information to your artifact to get it working. Open it with Text editor and below the most recent artifact you can add the necessary data:

Name	Cost	Hero Slots	Spell Book	War Machine 4	War Machine 3	War Machine 2	War Machine 1	Misc 5	Misc 4	Misc 3	Misc 2	Misc 1	Feet	Left Ring	Right Ring	Torso	Left Hand	Right Hand	Neck	Shoulders	Head	"Class (S,T,N,J,R)"	Description
------	------	------------	------------	---------------	---------------	---------------	---------------	--------	--------	--------	--------	--------	------	-----------	------------	-------	-----------	------------	------	-----------	------	---------------------	-------------

Slots: All that is marked in red are the slots, normally only the body slots are used for artifacts. The artifact will be used in that slot if you have marked it with "x"

Class (S, T, N, J, R); With the capital letter you mark the kind of artifact that will be the one you have created. There are other ranges that do not appear because they are very specific.

S: Grail class, is the rank of the grails in the game (Grails also appear as artifacts when you get it). These do not appear on the map, nor will they be rewards of any kind.

B: It is the class used by Spell Book and Scrolls, similar to class S, they will not appear on the map or reward, but they will have the behavior similar to Spell Book or Scrolls.

W: It is the class used by war machines, similar to the previous classes, they will not appear on the map or rewards, however they can be added with map editor without any problem.

T: Treasure class.

N: Minor class.

J: Major class.

R: Relic class.

When you're done, the last step is to add them to the text objects one more time. (zaobjts, zeobjts and zobjcts).

Your artifact would be ready on the map, but now with the Emerald plugin we will give it the effects of a real artifact. To create an effect go to "artifacts" folder inside the mod's data folder, create a .cfg file with notepad named in this case "272" and add the parameters you want in this list:

Attack=

Defence= (Yes, Defence, no Defense)

Knowledge=

Spellpower=

Luck=

Morale=

LuckBP=

MoraleBP=

*BP it's mean in Backpack

Autospell=

*****9=

*Enter the ID of the spell there so that the artifact is cast at the beginning of the battle as combos do, it doesn't work with individual damage spells but they do work with individual effect.

Autosummon=

*****9=

*Similar to Autospell, but with creatures.

AutosummonPower=

*****9=

*This must go together with "Autosummon=", in "AutosummonPower=" you measure the value of how strong the invocation will be, +positive for constant, zero for hero spellpower, -negative for promiles of spellpower.

UpgradeFrom=

UpgradeTo=

*****9=

*****9=

*Put ID of the creature that you want to upgrade for the other that you have chosen, the upgrade takes place the next day.

RegenerateSpellpoints=

AttackCR=

DefenceCR=

DamageMin=

DamageMax=

Speed=

Health=

Shots=

Casts=

Immunities=

*Put ID of any spell so that the creatures are immune, you can put multiple IDs in the same row.

GivesSpell=

*The artifacts will give the spell that you have put in ID

7. Bonus: How to create Creature Banks in TUM

To make creature banks, it requires that you already have enough knowledge in the art of creating and modifying adventure objects, you can know everything to create creature banks in this link.

8. Contact

You can find me on the forums or on Discord from Heroes 3 ERA:

HC: <http://heroescommunity.com/viewthread.php3?TID=46241>

Russian Forum: <http://wforum.heroes35.net/showthread.php?tid=5520>

Chinise Forum: <https://www.h3wog.com/thread-75504-1-1.html>

Discord: <https://discord.gg/CWQVrErG>

The mod is full open source and so you can even modify and improve Amethyst (to create creatures) and Emerald (to create artifacts) if you have coding skills. The open source links are below:

Amethyst: https://gitlab.com/Knightmarevive/_h3era_plugins_/-/tree/master/Amethyst2/Release

Emerald: https://gitlab.com/Knightmarevive/_h3era_plugins_/-/tree/master/Emerald3/emerald

Third Upgrades Mod also has GitHub in case you want to report any important bug or any idea for improvements:

<https://github.com/Archer30/Third-Upgrade-Mod>
